Mapping ICDL to DigComp

We mapped ICDL to DigComp by comparing the learning outcomes from each ICDL module against the competence descriptions for each competence level. ICDL modules can be broken down into specific learning outcomes describing the skill or knowledge that a candidate is expected to have if they complete the module successfully. By mapping these learning outcomes to the competence levels in DigComp, we can see how different ICDL modules map to the competences. We can also see what level, or levels, of the competence they map to. You can see a simplified mapping of modules to competence areas in our graphic. A much more detailed mapping is available on request.
